

Nov 25th 1962

Dear Mario,

I did not myself answer your letter in which you mention Texas and Buffalo, but asked Hermine to write: I was (and I still am) unwell, ~~overworked~~, etc., and I also wanted to make some enquiries. These led me to believe that both offers are excellent, and my feeling is that you would be wise to accept them both. (Incidentally, your Texas offer is really one of the best I ever heard of. You did not mention details about Buffalo, but it certainly has a good reputation.)

I find this place ^{here} very pleasant and genuinely interesting; everybody is really out to get nearer to the truth. The Center consists, at the moment, of Professors Feigl, Maxwell, Feysrabend, three advanced students, and myself; to which Professor

Hill (Professor of Physics) has
joined himself informally. He has a
number of excellent ideas: detailed
criticism of the quantum theory
which does not only assert that it is
incomplete but points out where and
how and why. He has also more
general ideas (on the invalidity of
continuum-mathematics in physics)
which, though interesting, do not
seem to me very promising of new results.
But perhaps most interesting is his view
that quantum physics is becoming a new
scholasticism, and that we are near the
end of physics as a science.

Incidentally, have you ever looked at
my old ⁽¹⁹³⁴⁾ criticism of Heisenberg in my logic
of Scientific Discovery? Something you said
in one of your last letters made me
doubt it (I have forgotten what it was.)

Kindest regards to both of you

yours ever

Karl
